

## FOR IMMEDIATE RELEASE

### VJ Electronix to Show Advanced Rework Technologies at NEPCON South China

July 2015 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection systems, will exhibit in Booth A-1J35 at NEPCON South China, scheduled to take place Aug. 25-27, 2015 at the Shenzhen Convention & Exhibition Center in China. VJ Electronix will highlight the new high performance Summit II, SRT Micra and XQuik with AccuCount for counting components stored in reels.

The new Summit II is the latest semi-automated rework system. Improved ergonomics combined with next-generation controls and proven heating technology provide the greatest performance and flexibility. Summit II features a smaller footprint, yet larger board capacity with easy to adjust board support fixtures. Enhanced SierraMate software takes the popular user-friendly operation to the next level with a simple icon driven GUI and unmatched flexibility through easily customized operation sequences.

The SRT Micra is VJE's benchtop platform that is specifically designed for the rework of high density assemblies such as Smartphones, Tablets, GPS and other portable products. The new SierraMate V9 software simplifies process definition and assures consistent, repeatable results between facilities and even continents. The system's revolutionary heaters and thermal controls provide extremely high throughput and unmatched performance, regardless of typical variations in utilities, such as electrical power.

With the XQuik with AccuCount Technology, maintaining inventory control of component reels has never been faster or easier. The XQuik with AccuCount system automatically counts components as small as 01005 with better than 99 percent accuracy. The process takes only seconds, compared to many minutes required by typical counting processes. The new XQuik II handles reels from 7 to 15".
