

**FOR IMMEDIATE RELEASE**

**VJ Electronix, Inc. to exhibit the new SRT Micra Rework Platform at Productronica.**

*August 2011 — VJ Electronix, Inc., a leader in Rework technologies and global provider of X-ray inspection systems, will exhibit the new SRT Micra Rework Platform in Booth A4-509 at the upcoming Productronica International Trade Fair, scheduled to take place November 15-18, 2011 at the Messe in Munich, Germany.*

The SRT Micra is a brand new benchtop platform that is specifically designed for the rework of small form factor products incorporating the latest high density electronic designs and devices, such as Smartphones, Tablets, GPS, and other portable products. The new SierraMate V9 software simplifies process definition and assures consistent, repeatable results between facilities and even continents. The systems' evolutionary heaters and machine controls provide extremely high throughput and unmatched performance, regardless of typical variations in utilities, such as electrical power.

The Micra offers an unprecedented Auto-Run feature, a newly developed automated process set-up tool and virtual process engineer. Auto-Run minimizes rework setup and profiling times. Highly efficient heaters on the Micra minimize rework cycle times and maximize production throughput. The systems' inherent accuracy and fixed position core (head) easily accommodates new micro electronic packages, including 01005 micro-passives and 0.3 mm pitch area array devices.

The Micra delivers optimized micro-scavenging, the automated removal of residual solder of tightly spaced micro-passives, PoP layers, asymmetrical RF Shield patterns and micro-BGA submillimeter lands and pitches. The SRT Micra provides the complete mobile device rework solution.

**About VJ Electronix, Inc.**

VJ Electronix, Inc. manufactures production ready Rework and X-ray inspection solutions with advanced capabilities. The company also provides custom Rework and X-ray solutions tailored to satisfy specific application requirements.
